

CAGE Adapted to Include Drugs (CAGE-AID)

Resource summary: The CAGE (Cut down, Annoyed, Guilty, Eye opener) Questionnaire has been widely used to screen for risk of alcohol misuse. This similar version, the CAGE-AID,¹⁴⁶⁰ asks about alcohol misuse and drug use. A “yes” response to any of the questions can mean that substance misuse is present. However, the CAGE-AID does not ask about certain important aspects of substance use, including past substance use, frequency of use, and effects of using the substance. It is available at www.hiv.uw.edu/page/substance-use/cage-aid.

Treatment Planning

Alcohol Health-Related Risk and Treatment Response Pyramid^{1461,1462,1463}

Resource summary: The Alcohol Health-Related Risk and Treatment Response Pyramid illustrates how to apply clinical interventions to corresponding levels of health-related risk associated with drinking. It can be used to assess older adults’ risks.
